

“All Water Is Precious”

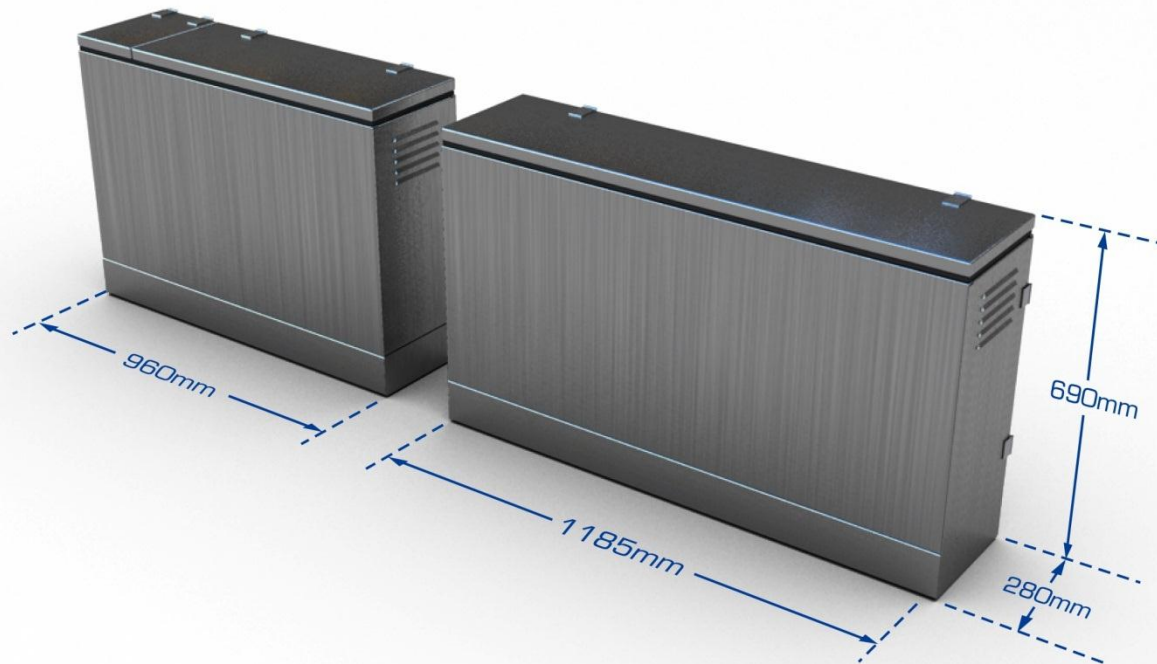

# Here's the award winning Newtreat "Super System"

Now ... Here's the "Split System"  
Like this...

# Or this!...

We treat greywater that looks like this...

To this ...

# Examples from a houseboat!

# How does it work? ... ions!

Electrolytic plate set creates iron & aluminium.

# Control Box ...

## Located where you want it

# Unit located where you want it!

On the deck ... On the roof ... Or split!

# Fewer moving parts ...

Probes not float switches make the difference.

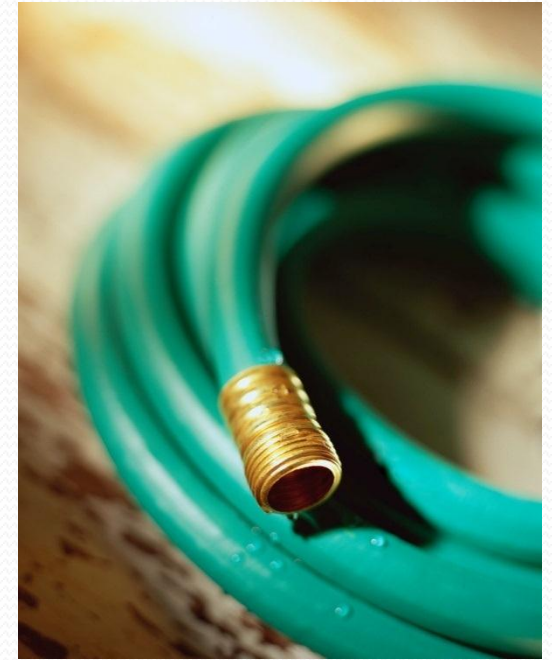

# Power?

- **Comparatively low!**
- **Requires “clean” 240 volt supply from a power point. (only 1 x 240 volt pump!)**
- **During treatment unit draws maximum of 1 amp. When idle unit draws 0.2 amps.**

# Maintenance

- Regular maintenance is essential for all greywater systems.
- “Suck and flush” – as with black water
- Hose down the plate set
- Check filters

# Again ...why Newtreat?

- **SIZE (especially now it can be split)**
- **It's quiet**
- **It's chemical free**
- **Power usage comparison**
- **Value for money!**

# THANK YOU

**WINNER.**
